

DECISIONOS

The Operating Brain for Founder-Led SMEs

Complete product & workflow guide — how spoken and written decisions become structured tasks, financial records, and a shared operational brain for your whole team.

Product & Workflow Documentation

1 What is DecisionOS?

DecisionOS is a multi-tenant AI operating system for small and medium businesses. Founders and teams **capture decisions** by voice, text, WhatsApp or documents; an **AI pipeline** turns them into structured tasks, financial records, and contacts; and everyone works from a single, role-aware **operational brain**.

It replaces scattered WhatsApp messages, notebooks, and spreadsheets with one place where a decision spoken once becomes a tracked task with an owner, a due date, proof of completion, and full searchable history.

The core promise

"Speak the decision. We run the company." Capture once — DecisionOS routes it to the right department, drafts the task or record, assigns an owner, chases follow-ups, escalates when stuck, and files everything into the Company Brain.

Who uses it

PERSONA	WHAT THEY GET
Owner / Founder	Full visibility: CEO Brief, Operating Score, team execution, finance, settings, and cross-department control.
Managers / Directors	Department review queues, task assignment, handoffs, and approvals for their modules.
Employees	A focused "My Work" list, execution guides, proof-of-work uploads, and leave requests — only what they have access to.

2 Roles & Access Model

DecisionOS is **multi-tenant** (each company is isolated) with **role-based access control (RBAC)** and **module-level permissions**. The Owner defines roles and grants each role granular access.

Module permissions

PERMISSION	UNLOCKS
INBOX	Decision Desk — capture & triage
DATA_INPUT	Capture — documents, CSV/Excel, WhatsApp, Review Queue
PEOPLE	People hub (CRM-lite) & contact profiles
BRAIN	Company Brain search & Ask AI
LEDGER / FINANCE	Finance module (expenses, assets, inventory, AI brief)
VOICE_CAPTURE	Voice & text decision capture
OWNER-ONLY	Settings, Operating Score, Journal

My Work, CEO Brief, Calendar and Meeting Notes are available to every signed-in member; content is always scoped to what the member is allowed to see.

3 The End-to-End Workflow

Every input flows through the same intelligent pipeline. This is the heart of DecisionOS.

1. Capture →

A decision or document enters via **voice**, **text**, **WhatsApp**, or an uploaded **PDF / photo / CSV**. Voice can be paused/resumed; an animated "Thinking" state shows AI processing.

2. AI Extraction & Triage →

AI transcribes, classifies (task, invoice, payment, contact, complaint), extracts structured fields, assigns a confidence score, and detects duplicates. High-confidence items can auto-file; uncertain ones are flagged for attention.

3. Smart Routing →

Items are routed to the correct **department Review Queue** based on classification and configurable rules (e.g. purchase bills → Finance reviewer).

4. Review & Approve →

A reviewer opens the original file, edits fields, reassigns, requests clarification, approves, or rejects. Owner approval can be required for sensitive items (escalation).

5. Create Work & Records →

On approval the system creates **tasks** (with owner + due date), **invoices/payments**, **contacts**, and rolls purchase bills / outgoing payments into the **Finance ledger** as expenses.

6. Execution & Proof →

Assignees work tasks in My Work using AI execution guides, tick off steps, upload **proof of work** (photos / voice), and hand off between teammates.

7. Follow-up & Escalation →

The engine chases overdue work, notifies stakeholders, and escalates blockers to the Owner.

8. Company Brain

Everything — decisions, tasks, contacts, and every financial record — is written into the searchable Company Brain, queryable in plain English.

4 Modules & Features

Decision Desk /

The unified inbox & capture screen.

- Capture decisions by **voice** (record with pause / resume / cancel) or **text**.
- Live "Thinking" animation while AI extracts and structures the input.
- Unified stream of incoming items awaiting triage.

Capture /INGEST DATA_INPUT

Bring in the outside world — documents, spreadsheets, and WhatsApp.

- **PDF / Photo upload**: invoices, bills, receipts, POs read by AI OCR.
- **CSV / Excel import**: customer, supplier, sales or payment lists — columns auto-detected.
- **WhatsApp Cloud API**: messages & media arrive as AI-drafted items (scan the QR to connect).
- **Review Queue**: department-scoped queue with Pending / Needs attention / Clarification / Filed / Rejected tabs. Reviewers can **open the original file**, edit, reassign, clarify, approve, or reject — with confidence scores & duplicate warnings.

My Work /MY-WORK

Every member's operational home.

- Personal task list plus (for owners/managers) an **All Tasks** view with per-member filtering.
- **AI Execution Guide**: AI-generated step-by-step plans; tick off steps as you go.
- **Proof of work**: attach photos / voice notes; reviewers see them as clickable full-size evidence.
- **"View details" popup**: one tap opens a full read-only view — what was done, proof, and the activity / handoff trail.
- **Handoffs & comments**: pass a task between teammates with context.
- Embedded **Leave** and **Workflows** views (sales-dispatch, purchase-payment, etc.).

CEO Brief /BRIEF

The founder's daily situational report.

- Daily digest of what got done, what's open, what's overdue, and what needs a decision.
- "Send Daily Digest" to push the brief out on demand.
- Snapshot of tasks done / open / overdue and open complaints.

People **/CONTACTS** PEOPLE

CRM-lite operational contact hub.

- Customers, suppliers & stakeholders — auto-created from captured documents.
- Contact profiles with linked invoices, payments, tasks & history.

Company Brain **/BRAIN** BRAIN

Ask your business anything.

- Natural-language search & Q&A across decisions, tasks, contacts and finance.
- Every approved record — including every financial entry — is indexed automatically.

Finance **/LEDGER** LEDGER / FINANCE

A lightweight financial cockpit, AI-first.

- **Overview** (default): KPI cards (total spend, outstanding, asset value, inventory value) + monthly-spend, category and top-vendor charts.
- **AI Finance Brief**: a one-line headline plus a ranked "**Action Items**" list — punchy, colour-coded pointers (Urgent / Important / FYI). Tap a pointer to expand, then **Create a task** from it or **Ask AI** about it.
- **Expenses, Assets, Inventory**: full tracking with per-tab AI analysis and Ask AI.
- **Bill attachments**: attach a photo/PDF to any entry — AI reads it and fills the fields; the file stays viewable for audit. Attachment optional.
- Auto-flow: approved purchase bills & outgoing payments become expenses automatically; asset purchases auto-create assets.

Meeting Notes **/MEETINGS**

- Capture and record meeting notes; turn discussion into tracked action items.

Operating Score & Team Execution **/OPERATING-SCORE** OWNER

- **Company Health** score (0–100) across Execution, Finance, Sales & Responsiveness.
- **Team Execution leaderboard**: each member's activity score, done / open / overdue counts.
- **Tap any member** to open their detail page: completion %, proof-upload rate, plans used, photos / voice updates, plus an **AI Work Coach** review (strengths, areas to improve, a recommended habit).

Leave & Absence </MY-WORK?VIEW=LEAVE>

- Employees request leave; approvals flow to managers/owner.
- **AI impact routing**: assesses who/what a planned absence affects.
- Absences surface on the shared Calendar and CEO Brief.

Calendar </CALENDAR>

- Shared view of due tasks and team leave / absence.

Notifications & Escalations </NOTIFICATIONS>

- Follow-up and escalation engine keeps overdue and blocked work visible.
- Owner-approval gating for sensitive captured items.

Settings </SETTINGS> [OWNER](#)

- Workspace & company profile, currency, and team management.
- Define **roles** and grant **module-level permissions** per role.
- WhatsApp connection and company operating rules.

5 AI & Integrations

CAPABILITY	POWERED BY
Decision & document understanding, triage, finance insights, work coach	Anthropic Claude (Sonnet)
Document / bill OCR & field extraction (vision)	Google Gemini 2.5 Flash
Voice-note transcription	OpenAI transcription
Inbound messages & media	Meta / WhatsApp Cloud API
Resilience	Emergent Universal LLM key as automatic fallback

Planned connectors: Zoho Books (customers / invoices / payments sync) and a read-only Tally connector.

6 Architecture at a Glance

- **Frontend:** React + TailwindCSS + Shadcn UI — a distinctive "Optical Clarity" design (Geist type, glassy sticky headers, red/black identity). Fully responsive with a mobile bottom-nav.
- **Backend:** FastAPI (async) with role-based auth; all APIs under `/API`.
- **Database:** MongoDB (Motor async) — multi-tenant, per-company isolation.
- **Auth:** JWT + secure HttpOnly cookies; email/password and mobile OTP sign-in.

In one sentence

DecisionOS listens to how a business actually runs — messy voice notes, WhatsApp forwards, and paper bills — and quietly turns it into an organised, accountable, searchable operation that a founder can steer from a single screen.
