

Product Guide

Every menu, every feature, and how it works — for founders and their teams.

DecisionOS is an AI operating system for founder-led businesses. It captures spoken or typed decisions, turns them into structured tasks, and gives your whole team one shared operational brain. This guide walks through each item in the left-hand menu and explains what it does, who can see it, and how to use it day to day.

How access works

DecisionOS uses **role-based access**. The Owner sees everything. Each employee only sees the menus they have permission for (e.g. a Finance role sees Finance, a Sales role may not). Menu items automatically hide when you don't have access, so your team only ever sees what's relevant to them.

Menu at a glance

Menu	What it's for	Who sees it
Decision Desk	Unified inbox — capture & triage everything	Anyone with Inbox access
CEO Brief	Daily AI summary of what needs attention	All users (owner-focused)
My Work	Your tasks, board, workflows & leave	All users
People	Team, customers & vendors (CRM-lite)	People access
Company Brain	Ask AI & search everything the company knows	Brain access
Finance	Expenses, assets, inventory & AI finance brief	Finance/Ledger access
Capture	Upload files, invoices, notes for AI processing	Data-input access
Meeting Notes	Record/transcribe meetings into actions	All users
Settings	Company rules, vocabulary, language, security	Owner only

1. Decision Desk (Unified Inbox)

What it does. Your single front door for everything coming into the business — spoken decisions, typed directives, uploads, invoices, payments and complaints. AI reads each item, classifies it, and routes it to the right department review queue.

How it works

- **Tap to speak** a decision, or type a directive in the box. AI structures it into a clean summary with tasks.
- **Decision Approvals:** review AI-extracted decisions, then Approve, Reject, or Discuss who raised it.
- **Needs Your Attention:** items the AI flagged for you specifically.
- **Tasks & Activity:** a live feed of everything happening — filter by type.
- On mobile, **swipe right** on a feed row to view it, **swipe left** to dismiss.
- Reassign an auto-assigned task to another member or a whole team/role right from the desk.

Tips

- 'Inbox zero' means you're fully caught up — captured items appear here automatically, already classified.
-

2. CEO Brief

What it does. A daily, AI-generated executive summary that tells the founder what actually needs attention — fires to put out, decisions pending, workflows stuck, and money that needs a decision.

How it works

- Opens with a plain-language headline of the day's priorities.
- Counters show open 'fires' and items needing action.
- Every line is a **deep link** — click a task or workflow to jump straight to that exact record.
- Use **Send Daily Digest** (top-right) to email the brief to yourself or the team.

Tips

- Check this first thing each morning — it replaces scrolling through everything manually.
-

3. My Work

What it does. Your personal operational cockpit. Everything assigned to you, plus team views, live workflows and leave — all in one place.

How it works

- **My Work / All Tasks:** switch between just your tasks and the whole team's.
- **AI Priority:** let AI score and order tasks by what matters most right now.
- **Board:** a kanban view of tasks by status.
- **Workflows:** track flagship operational pipelines (e.g. Sales Orders, Procurement) as cards moving through stages; advance a card with one click.
- **Leave:** request time off; AI routes the impact of your absence to the right people.

Tips

- Tasks created from decisions, finance insights or meetings all land here automatically.
-

4. People

What it does. A lightweight CRM for everyone your business deals with — your team, your customers and your vendors. (Labels adapt to your industry, e.g. 'Dealers' or 'Suppliers'.)

How it works

- **Employees** tab (managers/owners): add team members, set their role and module permissions, and assign a reporting manager.
- **Customers** tab: add and manage customer/dealer records.
- **Vendors** tab: manage suppliers/vendors.
- Click any contact to open a full profile with linked history.
- New members can be invited with email + password, or set as mobile-OTP (passwordless) users.

Tips

- Promote a trusted partner to co-owner from the Employees tab — at least one owner must always remain.
-

5. Company Brain

What it does. The shared memory of your business. Ask questions in plain language, or search for the exact records behind any decision.

How it works

- **Ask:** get an AI answer grounded only in your company's real data, with source citations.
- **Search:** find exact records — decisions, tasks, workflows, contacts and company memory — that match your words.
- Both Ask and Search support **voice dictation** — tap the mic and speak.
- Rule of thumb: **Ask** = get an answer; **Search** = find the records.

Tips

- Trace any founder decision all the way to the tasks and workflows it created.
-

6. Finance

What it does. All your money in one place, with an AI finance analyst on top. Track spend, assets and inventory, and get proactive alerts.

How it works

- **Overview:** KPIs (total spend, outstanding, asset value, inventory value), monthly spend chart, category breakdown and top vendors.
- **AI Finance Brief:** a headline plus prioritised action items (urgent / important / FYI). Turn any insight into a task, or Ask AI about it.
- **Expenses / Assets / Inventory** tabs: add records manually, or attach a bill/invoice photo or PDF and AI reads it and fills the details.
- Ask AI questions about your finances (e.g. 'Which vendor did I spend most on?').
- Approved purchase bills and outgoing payments auto-flow in from WhatsApp/uploads.

Tips

- Set your high-value threshold and owner sign-off rules in Settings → Money & Approvals.
-

7. Capture

What it does. The intake tool for feeding the AI. Drop in files, invoices, screenshots or notes and let the pipeline classify and route them.

How it works

- Upload documents, images, invoices or payment screenshots.
- AI extracts the key data and creates a draft in the right department's review queue.
- Money items route to Finance; operational items route to the relevant team.
- A badge in the sidebar shows how many captured items are pending review.

Tips

- WhatsApp messages sent to your workspace number also flow in here automatically.
-

8. Meeting Notes

What it does. Turn meetings into structured outcomes. Record or dictate, and DecisionOS transcribes and pulls out decisions and action items.

How it works

- Capture a meeting by voice; AI transcribes it.
 - Decisions and tasks are extracted and can be pushed into My Work and the Company Brain.
 - Everything stays searchable later from Company Brain.
-

9. Settings (Owner only)

What it does. Where the owner configures how the whole company operates — rules, terminology, language and account security.

How it works

- **Company Details:** name, industry and business description (sharpens AI accuracy).
- **Business Vocabulary:** the words your industry actually uses (customer vs. dealer, etc.).
- **Operating Model:** your AI-generated workflow pipelines and task categories — editable.
- **Language:** pick your interface language (English, , ). This applies to you only.
- **Your Profile:** name, mobile number and sign-in details.
- **Password & Security:** change your account password.
- **Money & Approvals:** default currency, high-value threshold and owner sign-off rules.

Tips

- The interface language is per-user — each teammate can choose their own without affecting others.
-

Top bar & shared tools

- **Send Daily Digest:** email the current brief to yourself or the team.
 - **Language switcher** (globe icon): change your interface language on the fly.
 - **Light / Dark theme** toggle.
 - **Notifications** (bell): see follow-ups, escalations and mentions; click one to jump to the item.
 - **Profile / Sign out:** manage your account or log out.
 - **Voice everywhere:** mic buttons let you dictate instead of typing in most input areas.
-

DecisionOS — one shared operational brain for founder-led teams. Multi-tenant, role-based, AI-native. This guide reflects the current product.
