

Mobile App Spec & Screen Reference

Actual mobile-view screenshots of every page and menu in the web product, with a detailed breakdown of the features on each screen. Use this as the source of truth so the mobile build matches — same menus, same features, same layout order.

How to use this document

- Screenshots are captured at a **390 × 844** mobile viewport (iPhone-class), full-page, so every feature is visible.
- Each screen lists its **route**, **who can access it** (permission), its purpose, and every control on it.
- The mobile app must include **all 9 primary menus** plus the global header and bottom tab bar shown here.
- Navigation pattern: a **hamburger drawer** (full menu) + a **5-item bottom tab bar** (Desk · Brief · Work · People · Brain).

Menu checklist (must all exist in the mobile app)

1. Decision Desk	4. People	7. Capture
2. CEO Brief	5. Company Brain	8. Meeting Notes
3. My Work	6. Finance	9. Settings (owner)

Also required: global header (logo, language globe, light/dark, notifications bell with unread badge, hamburger) and bottom tab bar. Owner sees all menus; employees only see menus their permissions allow (Settings is owner-only).

1. Navigation — drawer + bottom bar

hamburger → drawer; bottom tab bar

Access: Owner sees all; employee sees permitted menus only

The primary navigation. Tapping the hamburger opens a left drawer with the full menu; a persistent bottom bar gives 1-tap access to the five core areas.

On this screen

- Drawer header: company logo, workspace name, signed-in user + role badge (OWNER).
- Full menu list: Decision Desk, CEO Brief, My Work, People, Company Brain, Finance, Capture, Meeting Notes, Settings.
- Active item highlighted in red. Bottom of drawer: **Send Daily Digest** and **Sign out**.
- Bottom tab bar (always visible): Desk · Brief · Work · People · Brain.

Mobile build notes

- Replicate this exact menu order and the 5-item bottom bar. Hide items the user has no permission for.
- Settings appears only for the owner.

2. Login

/login

Access: Public

Sign-in screen for returning users. New companies sign up (owner) to create a workspace.

On this screen

- Email + password fields and a submit button.
- Supports mobile-OTP (passwordless) members and email/password members.
- On success a JWT session is created and the user lands on Decision Desk (or My Work if no inbox access).

Mobile build notes

- Mobile app must support both password and OTP login. Store the session token securely.

3. Decision Desk (Unified Inbox)

/inbox

Access: Requires 'inbox'

The single front door: capture decisions by voice/text and triage everything the AI classifies.

On this screen

- Capture box: voice record (with timer, pause/resume/cancel/finalise) and a type-a-directive field + submit.
- Language selector for the capture; 'structuring...' banner while AI works.
- Sections: Decision Approvals, Needs Your Attention, and a live Tasks & Activity feed with filters.
- Feed rows show type chips (TASK/DECISION/INVOICE/REMINDER...). Mobile: swipe right = view, swipe left = dismiss.
- Clarify panel when AI needs more info (submit / skip / cancel).

Mobile build notes

- This is the home screen. Prioritise the capture box + feed. Implement swipe gestures on feed rows.

4. CEO Brief

/brief

Access: All users (owner-focused)

A daily AI executive summary of what needs attention.

On this screen

- Headline of the day + counters (open 'fires').
- 'Fires to put out today' list — each row deep-links to the exact record.
- Shortcuts: Operating Score, Work Coach, Journal (owner-only), and period controls (morning/evening).

Mobile build notes

- Deep links must open the specific task/workflow record on tap.

5. My Work

/my-work

Access: All users

Personal cockpit: your tasks with optional AI prioritisation, plus board/workflows/leave views.

On this screen

- Scope toggle: My Tasks vs All Tasks. AI Priority toggle (each task shows a priority score with bars).
- View toggle: My Work · Board · Workflows · Leave.
- Tasks grouped by category; per-task actions: respond, update, attach, mark done, reassign, approve/reject, AI execution plan.
- Access-restricted banner if you open an item you can't see.

6. My Work — Board (Kanban)

/my-work (Board view)

Access: All users

Kanban view of tasks by status for quick drag-style triage.

On this screen

- Columns by status with task cards.
- Same task actions as the list view.
- Switch back to list / workflows / leave via the view toggle.

Mobile build notes

- On mobile, columns scroll horizontally; keep cards tappable to open details.

7. Workflows (Pipelines)

/my-work?view=workflows

Access: Requires 'workflows'

Track flagship operational pipelines as cards moving through stages (industry-specific).

On this screen

- Pipeline tabs come from the company Operating Model (e.g. Production, Distribution, Procurement).
- Kanban of stages; each card shows counterparty, amount, last update.
- Advance a card one stage with a tap; owners can delete cards; 'New' creates a card.

Mobile build notes

- Pipeline names + stages are dynamic (tenant.operating_model) — do NOT hard-code them.

8. Leave & Absence

/my-work?view=leave

Access: All users; approve needs 'leave_approve'

Request time off / report absence; AI computes impact and routes to approvers.

On this screen

- Tabs: My leaves · Approvals · Approver config.
- Request leave: type, from/to dates, half-day portion, reason.
- Report absence: reason, note. View AI Impact (tasks/workflows at risk) and 'apply all' reassignment.
- Approvers can approve/reject/request info; owner configures approvers.

9. People — Employees

/contacts

Access: Requires 'people'

CRM-lite for team, customers and vendors. Employees tab manages the team.

On this screen

- Tabs: Employees · Customers · Vendors (labels adapt to industry).
- Employees (needs team_manage): add user, set role, permissions, reporting manager; invite links (copy / WhatsApp share); login method toggle (password / OTP).
- Permission list + live menu preview so you see what a member will access.

10. People — Customers / Vendors

/contacts (Customers tab)

Access: Requires 'people'

Manage customer/dealer and vendor/supplier records.

On this screen

- Add contact; search; filter by status and type.
- Contact form: name, company, email, phone, birthday, status, assigned owner, type.
- Log a complaint against a contact. Tap a contact to open its profile (relationship score, signals, re-score).

11. Company Brain — Ask

/brain

Access: Requires 'brain' (Ask uses 'ask')

Ask questions in plain language; AI answers grounded in your data with citations.

On this screen

- Ask / Search tab switch with helper text (Ask = answer, Search = records).
- Suggestion chips, a text box, voice dictation (mic), and Send.
- Answers show source citations.

12. Company Brain — Search

/brain (Search tab)

Access: Requires 'brain'

Find the exact records behind any decision.

On this screen

- Search box with voice dictation.
- Results grouped by Decisions, Tasks, Workflows, Contacts, and Company Memory with counts.
- Trace a decision to the tasks/workflows it created.

13. Finance — Overview

/ledger

Access: Requires 'ledger'/'finance'

All money in one place with an AI finance analyst.

On this screen

- KPIs: Total Spend, Outstanding, Asset Value, Inventory Value.
 - Tabs: Overview · Expenses · Assets · Inventory.
 - AI Finance Brief: headline + action items (Urgent/Important/FYI); create task or Ask AI from an insight; Refresh.
 - Charts: Monthly Spend, By Category, Top Vendors.
- Ask-AI box for finance questions.

14. Finance — Expenses / Assets / Inventory

/ledger (Expenses tab)

Access: Requires 'ledger'/'finance'

Ledger tables; add records manually or by attaching a bill AI reads.

On this screen

- Add dialogs: Expense (bill attach, title, amount, paid/unpaid, vendor, AI suggest category, date, notes); Asset (name, amount, category, vendor, date, status); Inventory (item, SKU, qty, unit, unit cost).
- Tables list records with source chips, attachments, delete.
- Approved purchase bills & payments auto-flow in from WhatsApp/uploads.

15. Capture — Import

/ingest

Access: Requires 'data_input'

Feed the AI pipeline: uploads, CSV import, and WhatsApp intake.

On this screen

- Main tabs: Import · Review.
- Upload document (image/PDF) and Import CSV drop-zones + pickers; direction banner + own-company warning.
- WhatsApp card: connection status, QR link, token-error hint, logs list + refresh.

16. Capture — Review

/ingest (Review tab)

Access: Requires 'data_input'

Review what AI extracted before committing to records.

On this screen

- Badge shows pending count.
- Sub-tabs: Invoices, Payments, Contacts, Tasks; records tables for invoices/payments.
- Approve/commit to turn drafts into real records.

17. Meeting Notes

/meetings

Access: All users

Turn meetings into minutes and actions.

On this screen

- Record by voice (recorder UI) or toggle paste/type to submit a transcript.
- AI writes Key Points and extracts decisions/tasks (searchable later in Company Brain).
- Meetings list of past sessions.

18. Settings (Owner only)

/settings

Access: Owner only

Configure how the whole company operates.

On this screen

- Company Details (name, industry, description, currency, region, GST, branches).
- Business Vocabulary (labels; AI regenerate). Operating Model (edit pipelines/stages, owner sign-off stage, task categories; regenerate).
- Team Roles; Products & Services; Approval rules.
- Language (per-user); Your Profile; Password & Security (change password); Money & Approvals (currency, high-value threshold, owner sign-off toggle).

19. Notifications

/notifications

Access: All users

Follow-ups, escalations and mentions from the follow-up engine.

On this screen

- Full list of notifications; unread badge in the header bell.
- 'Mark all read'. Tapping a notification opens the related item.
- The bell dropdown shows the latest few from any screen.

Parity checklist for the mobile build

Use this to catch anything missing or styled differently in the Emergent mobile app.

Navigation & shell

- Hamburger drawer with the full 9-item menu in the same order.
- Bottom tab bar: Desk · Brief · Work · People · Brain.
- Header: logo, language globe (EN/HI/TA), light/dark toggle, notifications bell with unread badge.
- Role-based hiding: employees only see permitted menus; Settings owner-only.

Per-screen features that are often missed

- Decision Desk: voice capture (timer/pause/resume/finalise), swipe-to-view/dismiss, Clarify panel, Needs-Attention + Approvals sections.
- My Work: AI Priority scoring, all 4 views (list/board/workflows/leave), execution-plan generation.
- Workflows: dynamic pipelines/stages from the Operating Model (not hard-coded).
- Finance: AI Finance Brief with create-task/ask-AI, bill-reading uploads, all 4 tabs.
- Capture: both Import and Review tabs + WhatsApp intake.
- People: Employees management (roles, permissions, invites, OTP) + complaints + contact profile re-score.
- Company Brain: Ask (with citations) AND Search (grouped records), both with voice.
- Settings: full owner config incl. Operating Model editor, Vocabulary, Money & Approvals, Password & Security.
- Multi-language (EN/HI/TA) applied per user; industry-specific labels via lexicon.

Screens captured from the live web app at 390×844. The mobile app should mirror these menus, features and layout order (visual styling can follow native platform conventions).
