

DECISIONOS

THE OPERATING BRAIN FOR FOUNDER-LED BUSINESSES

Speak the decision. **We run** the company.

The AI operating system that listens to how your business really runs — voice notes, WhatsApp, paper bills — and quietly turns it into organised, accountable, unforgettable execution.

A FOUNDER'S GUIDE

DECISIONOS.BIZ • 2026

Your business lives inside your head. That's the risk.

Every growing company runs on the founder's memory. A decision made in a corridor. An approval over WhatsApp. A bill on someone's phone. It works — until it doesn't.

How chaos creeps in

- › **Decisions evaporate.** Said once, forgotten by Friday. No owner, no due date, no trace.
- › **Work scatters.** Tasks live across WhatsApp, notebooks, calls and spreadsheets — nowhere and everywhere.
- › **Nothing is provable.** "I told him to do it." "It's done." Neither can be checked.
- › **You become the bottleneck.** Every follow-up, every approval, every "what's the status" routes back to you.
- › **The memory walks out the door.** When a key person leaves, the context leaves with them.

THE OLD WAY

Founder remembers → tells someone
→ hopes it happens → chases → repeats.

THE DECISIONOS WAY

Founder speaks → AI captures,
assigns, tracks, chases, and files it forever.

You talk. It's already done.

No forms. No apps to open. No "let me note that down." Watch what happens in the ten seconds after a founder speaks.

SECOND 0 — THE OWNER SPEAKS

"Follow up with Gupta Traders about the ₹12,000 pending payment, due next week."

SECOND 3 — THE AI UNDERSTANDS

Task

Assignee: Accounts

Vendor: Gupta Traders

₹12,000

Due: next week

SECOND 10 — IT'S LIVE & OWNED

✓ **Task created** — "Follow up on Gupta Traders payment" · assigned · due date set · reminder scheduled · filed to Company Brain.

That's the whole product in one breath: **capture once, everything else is automatic.**

One brain. Every input. Total recall.

DecisionOS isn't another app to check. It's a layer of intelligence that sits over your whole operation — taking messy human input and producing structured, accountable output.

SENSES

It listens everywhere

Voice, text, WhatsApp, PDFs, photos and spreadsheets — the channels your team already uses.

UNDERSTANDS

It reads meaning

AI classifies each input, extracts the numbers, names and dates, scores its confidence, and catches duplicates.

ACTS

It gets to work

Routes to the right department, drafts the task or record, assigns an owner, chases, and escalates when stuck.

REMEMBERS

It never forgets

Every decision, task and rupee is written to the Company Brain — searchable in plain language, forever.

Built to be trusted: multi-tenant & isolated per company, role-based access so people see only what they should, and secure sign-in. Enterprise discipline, founder simplicity.

Capture → Execute → Remember.

Every input — a voice note or a supplier's invoice — travels the same intelligent path. This is the spine of DecisionOS.

CAPTURE

Speak it, type it, forward it, or upload it. Voice records with pause/resume; documents drop straight in; WhatsApp messages arrive automatically.

EXTRACT & TRIAGE

AI turns raw input into structure. Transcribes, classifies, pulls fields, scores confidence. High-confidence items can file themselves; anything unsure is flagged.

ROUTE & REVIEW

It lands in the right queue. The right manager opens the original file, edits, approves, reassigns, or asks for clarification — with owner-approval gates for sensitive items.

EXECUTE

Approval creates real work. Tasks with owners & due dates, invoices, payments, contacts, and finance entries — all generated automatically.

REMEMBER

Everything is filed. The full trail — who decided, who did it, the proof, the money — lands in the Company Brain.

Where decisions become **done.**

Talk is cheap; execution is everything. DecisionOS gives every team member a focused place to work — and gives you proof it happened.

My Work

Each person's operational home — a clean list of exactly what's theirs. Owners get an all-team view with per-member filters.

AI Execution Guides

AI breaks each task into clear steps. Tick them off as you go; progress updates itself.

Proof of Work

Attach photos and voice notes. Reviewers open full-size evidence — no more "it's done, trust me."

Approvals & Handoffs

Pass work between people with context, request approvals, and keep a full activity trail on every task.

Workflows

Multi-step business flows — sales-dispatch, purchase-payment and more — run start to finish.

Follow-up & Escalation

Overdue work is chased automatically; blockers escalate to the owner before they become fires.

Operating Score & Team Execution: a live company-health score and a leaderboard of who's executing. Tap any teammate for their stats and an AI performance coach.

Your business, with a memory that **never quits.**

Every decision, task, contact and transaction is remembered and indexed. Ask a question in plain English; get the answer instantly.

"What did we owe Gupta Traders last month?"

"Which vendor did we spend the most on?"

"Show every decision about the Delhi order."

Institutional memory

Context stops walking out the door when people leave. It stays in the Brain.

One source of truth

Decisions, work, people and money — connected, not scattered across tools.

Every function, quietly on autopilot.

DecisionOS runs like a set of tireless departments — each watching, organising and advising, so a lean team performs like a large one.

FINANCE

The AI CFO

Snap a bill — AI reads it and files the expense. Live spend, outstanding, assets & inventory, plus a ranked **Action Items** brief you can turn into tasks in one tap.

INVENTORY

Stock in the open

Track items, quantities and value; purchase bills flow straight into the ledger and the Brain.

SALES

Nothing slips

Orders, invoices, follow-ups and dispatch workflows captured from a message and driven to completion.

HR & PEOPLE

Team & leave

Leave requests with AI impact-routing, a CRM-lite people hub, and performance coaching for every member.

OPERATIONS

The daily heartbeat

The CEO Brief gives founders a morning situational report — what's done, what's open, what's overdue, what needs a decision — while follow-ups and escalations keep the whole operation moving without you pushing.

From assistant, to manager, to **decision engine.**

Today DecisionOS captures and executes. Tomorrow it manages. Then it advises the founder on the decisions themselves.

NOW — THE OPERATING BRAIN

Capture, route, execute, remember. Your business, organised and accountable.

NEXT — AI MANAGERS

Department-level AI that assigns, balances workload, nudges the right people, and closes the loop with less human touch.

THEN — THE AI DECISION ENGINE

A system that doesn't just run decisions — it recommends them: spot the cash risk, flag the slipping order, propose the next best move, backed by everything the Brain remembers.

Speak the decision.
Soon, we'll help you make it.
